UC Irvine Extension is a global charter member of the Project Management Institute, the governing body that sets the standards for excellence in the project management profession. Most project managers start with training in the technology of their projects, but frequently lack an understanding of the managerial function necessary to manage projects. With industry leaders as instructors, UC Irvine Extension’s Project Management Certificate Program teaches students how to apply fundamental project management principles, theories and practices, including the concepts described in the most recent edition of A Guide to the Project Management Body of Knowledge (PMBOK® Guide).

The program offers an organized sequence of courses that will provide preparation in the practice of professional project management. Required courses cover the body of knowledge helpful in preparing for the Project Management Professional (PMP®) exam. Elective courses further develop skills in the area of process improvement, scheduling using Microsoft Project, project product development, and cost management.

The Software Architecture Certificate Program helps software application developers gain the knowledge and skills needed to design the architecture of complete software systems. While application developers and programmers tend to be more concerned with the functionality of individual components, software architects need to understand the business purpose and desired outcome of a software project from a global perspective, and be able to define how the various components (or objects) fit together.

Outcomes of a software project from a global perspective, and be able to tend to be more concerned with the functionality of individual components, complete software solutions. While application developers and programmers gain the knowledge and skills needed to design the architecture of a software project from a global perspective, UC Irvine Extension's Project Management Certificate Program teaches students how to apply fundamental project management principles, theories and practices, including the concepts described in the most recent edition of A Guide to the Project Management Body of Knowledge (PMBOK Guide). The program offers an organized sequence of courses that will provide preparation in the practice of professional project management. Required courses cover the body of knowledge helpful in preparing for the Project Management Professional (PMP®) exam. Elective courses further develop skills in the area of process improvement, scheduling using Microsoft Project, rapid product development, and cost management.

Certificate Programs Offered On-Site

Leadership Skills in Business Communication

Communication and Leadership in today’s business place has increasingly become more complex. Organizations demand effective communications that can effectively manage business and organizational changes, concerns or events. Effective communication is required internally with colleagues as well as externally with company stakeholders. Leadership involves the ability to provide clear guidance, set high expectations, inspire the passions of others, and communicate a sense of urgency for the completion of goals. The Leadership Skills in Business Communication Program focuses on providing professionals the tools and techniques necessary to foster open dialogue, participate in accomplishing team goals, be able to generate effective solutions to problems, and effectively communicate in challenging situations.

Leadership, Strategy, and Change

The Software Architect Certificate Program helps software application developers gain the knowledge and skills needed to design the architecture of complete software solutions. While application developers and programmers tend to be more concerned with the functionality of individual components, software architects need to understand the business purpose and desired outcomes of a software project from a global perspective, and be able to define how the various components (or objects) fit together.
